DETAILED ACTION

Allowable Subject Matter

Claims 1-7 are allowed.

The following is a statement of reasons for the indication of allowable subject matter: With respect to independent claims 1 and 6, there is simply no evidence in the prior art teaching or making obvious a support structure of a control board with support bosses containing split grooves, where the support bosses are arranged so at least two of the split grooves are non-parallel and have the property of allowing for expansion and contraction of the control board as in the claimed combination.

Claim 2 contains allowable subject matter as pertained to the orientation of the split grooves of the support bosses on the support member. While a significant amount of prior art exists on support structures and more specifically support bosses used to support control boards (US Patents 6418028, 3836704, 5963432) none of the prior art discloses that the support bosses are oriented as follows: The support bosses are located at corners of an imaginary quadrangle, when notations P1, P2, P3 and P4 are attached at positions of the respective corners of the imaginary quadrangle on the control board successively the support boss peripheral direction, at the corner position P1 is provided on the support member in an attitude by which the split groove is made to be orthogonal to a diagonal line connecting the corner positions P1 and P3, the support boss at the corner position P2 is provided on the support member in an attitude by which the split groove is made to be orthogonal to a diagonal line connecting the

corner positions P2 and P4, the support boss at the corner position P3 is provided on the support member in an attitude by which the split groove is made to be along a straight line connecting the corner positions P2 and P3 or a straight line connecting the corner positions P3 and P4, and the support boss at the corner position P4 is provided on the support member in an attitude by which the split groove is made be along straight line connecting the corner positions P4 and P1 or a straight line connecting the corner positions P3 and P4.
